Business Intelligence:
Create Valuable Insights
Enterprise Data

Most organizations today understand the intrinsic value of having ready access to quality, up-to-date information. When management and line-of-business users are better able to access and analyze critical business data, they are able to make informed decisions and seize opportunities to optimize costs, maximize profitability and generally help their companies operate more efficiently. Yet, many IT departments struggle to deploy effective business intelligence (BI) solutions. Constrained budgets, project plans that are too broad in scope and poor tool selection have all played roles in impacting BI initiatives. As a result, the status quo maintains. Data remains isolated in disparate systems, burdening IT to fulfill time-consuming reports and requests for analysis while critical business decisions remain on hold. To address these challenges, companies need cost-effective, yet comprehensive BI solutions that fit within constrained budgets - ones that can be implemented in a straightforward fashion to achieve quick ROI for line-of-business users. Oracle BI Solutions from ROLTA meet these needs and create a lasting impact on the business.

BUSINESS INTELLIGENCE CAPABILITIES
