Rolta GeoConference

Do you wish your GIS could be part of your teleconferencing system, so that you could view maps and images during teleconferences?
Are you looking for technology to add to your teleconferencing system for viewing and annotating maps and images?
Do you need to view maps and images in real-time with colleagues who are located at geographically dispersed locations?
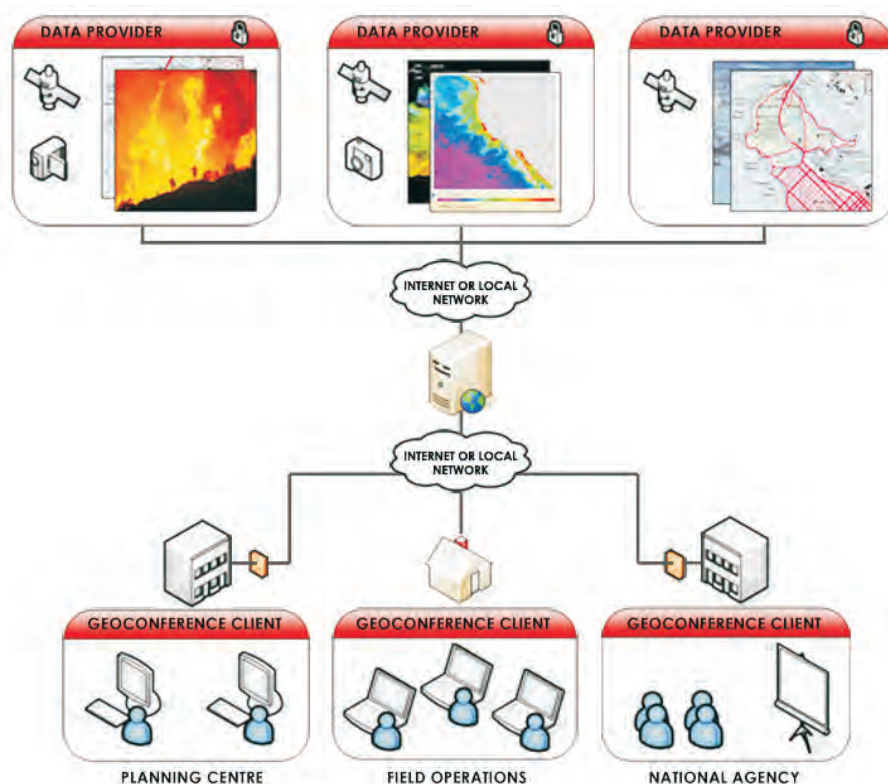

Real-time spatial collaboration

Rolta GeoConference is a live geospatial meeting system that operates via the Internet/Intranet and facilitates connections to standard GIS and mapping systems, allowing data to be viewed simultaneously from many remote locations.

Rolta offers a unique enterprise class solution built around two main components that match IT standards: the Rolta GeoConference Client application and the Rolta GeoConference Server software.

What is Rolta GeoConference?

Rolta GeoConference is an innovative way for your organization to share maps and images with distant colleagues and clients in real time.

It is a complete geographic information-based Web conferencing system. Create users, add data sources, and you'll have everything you need to hold GeoConferencing sessions – right out of the box.

Users access and participate in Web mapping conference sessions via the Rolta GeoConference Client. The component is thin, easy to deploy and may be freely distributed with no restrictions. It's easy to communicate and collaborate with external partners.

The Rolta GeoConference Server software component plays a central role. It acts as the bridge between the participants using the Rolta GeoConference Client. The Rolta GeoConference Server software stores participant expertise and situational findings.

Why Rolta GeoConference?

Rolta GeoConference provides an interactive environment and common operating workspace for users to share data and ideas and to exchange geospatial information in real time. Since everyone is looking at the same georeferenced map, geospatial intelligence can effectively and easily be integrated into various decision-making processes. Rolta GeoConferencing saves time and money for organizations by allowing team members to come together in a virtual setting to make fast and accurate assessments.

Benefits of Rolta GeoConference:

- Virtualisation of 'Situation room' map
- Group Situation Assessment and Decision Making
- Real-time feedback to colleagues near and far
- Reduces travel and facilitates teamwork
- Geospatial data is protected and not replicated
- Complementary with other geomatics technology investments

GeoConference Applications

Environmental Monitoring	Public Safety	Planning/Research	Disaster Management
View, share, and compare live and updated imagery from background and operational data.	Coordinate and share critical information among multiple organizations in real-time.	Reduce staff travel time and expenses by collaborating over the internet in real time using a common workspace.	See, aim, do – use a common operational workspace to deploy emergency management assets - quickly and effectively.
