

# ROLTA PHOTOGRAMMETRY NUCLEUS

Rolta Photogrammetry Nucleus includes the functionality of Project management. Project Management provides the Photogrammetry data management tools required for a production workflow. It has a wide range of auxiliary functions designed to simplify and optimize project processing.

## **Photogrammetry Manager**

The Photogrammetry Manager helps manage large jobs with the speed and flexibility needed for maximum efficiency in production. It provides for flexible project management, simple project layout, interactive point measurement, blunder detection and easy to use interface.

## **Model Setups**

It allows for easy import of third party triangulation packages for project creation in its native format. A well guided workflow based procedure makes for effortless job operation. Ability to perform Interior orientation, Single Photo Resection, Relative Orientation, and Absolute Orientation on digital aerial photographs.

## **Image Utility - Faster Job Processing**

It enables a onetime set up for the whole project. It delivers image project management with automatic interior orientation, image pyramid generation, image rotations and image enhancement. Effective batch processing for increased efficiency and productivity.

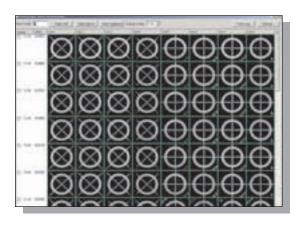

## Powerful Feature Editing Tools - 2D

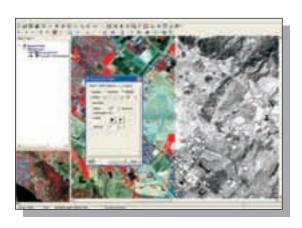

A highly efficient, powerful vector collection and editing package makes for the most practical mapping tool today. It is easy to learn and offers fast data acquisition on orthophotos, powerful data storage and specialized mapping applications.

## **Rolta Image Manager**

It is an application for viewing, enhancing and examining the remotely sensed raster imagery. It includes useful display tools such as fast roam, zoom, blend, flicker, swipe, image enhancement and numeric value display. It has layer management facility to handle multiple raster data in a single view port. The advanced tool like dynamic image enhancement allows the user to enhance the quality of the raster display dynamically while panning

## **Key Features**

- Camera and coordinate file maintenance including definition and editing
- Fully automatic and manual interior orientation
- Batch image rotation
- Simple project layout allowing viewing of all photos and data
- Model import capability in orientation program
- Powerful yet easy to use interactive applications
- Fast keypad application support
- Cursor masking hides vectors around cursor and cursor magnifier enlarges image around cursor
- Object oriented Python user programming language support
- Unattended global editing with batch applications
- Tracking devices It supports several System Mouse, Immersion Device, Trackball, Stealth 3D (Immersion & USB)
- Dynamic image enhancement tool while visualization of raster data

#### **Benefits**

- Easy to use interface allows the setting up, reading and export of aerial/satellite triangulation readings on unlimited sized blocks
- Ability to move photos and strips interactively in project layout
- · Project management tasks can be performed in interactive and batch mode
- Inexpensive method of independent model measurement - does not require stereo hardware for monoscopic measurements
- Results windows provide immediate feedback to the operator on measurements taken
- Strong programming support with Function Keys and Macros
- Pragmatic set of mapping applications and batch routines and support for analog, analytical and softcopy stereo plotters
- Basic image enhancement tool for both visualization of raster data
